

Mobile Threat Defense for Feds' New Normal

MeriTalk, in partnership with Lookout, surveyed 150 Federal cybersecurity managers in April 2020 to explore agencies' mobile threat defense.

Increasing Mobile Threat

97% of Federal cybersecurity managers say their agency's workforce uses mobile devices for multi-factor authentication, application access, or data access

85% agree **mobile work increases** the risk of cyber threats to their agency's data

75% are more concerned about their **mobile security posture** today than three months ago

Critical Defense

81% say **mobile threat defense** is an essential component to an effective cybersecurity strategy

78% believe a **zero-trust approach** is essential to securing the remote workforce

Progress Unlocked

Given the increase in telework, **25%** plan to adopt a mobile threat defense solution in the **next 12-18 months**

Benefits include:

#1 Enhanced security awareness

#2 Reduced risk

#3 Increased flexibility

#4 Improved compliance

Lookout helps agencies improve visibility into the entire spectrum of mobile risk and apply policies to measurably reduce that risk. To learn more, visit: lookout.com/products/government-solutions
